

**1** Vehicle motion detectors located on each BlinkerSign sense traffic approaching the path crossing (from both directions)

**2** Triggered BlinkerSigns warn drivers in both directions of a path crossing

**3** Path-facing Stop signs warn the cyclist to be alert of cross traffic

# BlinkerSign® Bike Path LED Warning System

Improved safety for bike path users and motorists

Recreational paths used by bikers and joggers inevitably end up crossing paths with traffic. TAPCO's Bike Path systems detect vehicles approaching these intersections, then trigger flashing LED BlinkerSigns® at the intersection. Drivers and cyclists are alerted simultaneously. Optional push-button activation, motion detecting bollards or other activations can be configured. Either way, the warning LEDs flash only when activated—and more importantly, only when the intersection may have a potential conflict. The systems are an easy-to-install solar safety solution for your city or state park trails.

- New bike/jogging path locations
- High incident intersections
- Rural roads
- Advance bike/jogging path warnings

Vehicle motion detectors trigger the system, warning path users and drivers simultaneously
