LED Crossing Signs

Our LED enhanced signs alert drivers to reduce speed and watch for pedestrians when approaching a crosswalk. Maximum visibility is provided by bright flashing yellow LEDs and high visibility fluorescent yellow sheeting that reflects light from approaching headlights. Our enhanced signs alert drivers much sooner than conventional signs, allowing them more time to slow down. The signs are clearly visible in daylight, at night and under the worst weather conditions.

The enhanced signs are particularly effective in areas with high incident rates: locations where sight distance is obstructed, approach speed is high, traffic volume is heavy, and many pedestrians are present.

LED crossing signs can be used stand-alone or as part of a complete crosswalk warning system where the signs flash in unison with in-pavement lights.

Why Our Signs are Better

- Bright, flashing LEDs alert drivers sooner than conventional signs.
- High visibility fluorescent yellow reflective sheeting.
- LEDs visible up to 200 yards away.
- AC or solar/battery power options.
- Durable aluminum face.
- Vandal and tamper resistant enclosure.

Specifications:

- Each sign has 88 yellow AlInGaP LEDs.
- Pedestrian Crossing Sign: 24"x24", 30"x30", 36"x36", 48"x48".
- School Crossing Sign: 30"x30", 36"x36", 48"x48".

Pedestrian Crossing Sign (W54).
Size shown 30" x 30".

School Crossing Sign (W66).
Size shown 30" x 30".
